

# IBX<sup>®</sup> SYSTEM

## APPLICATION INSTRUCTIONS

### BEFORE YOU START

As with all nail products, avoid skin or eye contact. If redness, itching or rash occurs, discontinue use. If client has had previous nail product reactions, do not apply.

Applying the **IBX SYSTEM** requires the use of gentle heat. The target temperature is 105° - 110°F (40.5° - 44.3°C) or slightly warmer than a Jacuzzi. We recommend one of these two options:

1. A basic table lamp with a 75-100 watt bulb, held 6-8 inches away.
2. A nail polish dryer, set to warm.

After you penetrate the product into the upper layers of the nail plate with gentle heat, the **IBX SYSTEM** will require curing with either an LED or UV style lamp. Cure time should be based on the manufacturer's suggested cure time for their gel polish color coat.

**IBX REPAIR SHOULD NEVER BE USED ALONE, IT MUST BE USED IN COMBINATION WITH IBX STRENGTHEN.**

### WE RECOMMEND

To SEE exactly how **IBX** is applied, watch our How-To Video at [FamousNamesProducts.com](https://www.famousnamesproducts.com)

# IBX<sup>®</sup> SYSTEM

## UNDER GEL POLISH

### FIRST APPLICATION - UNDER GEL POLISH

Always start with a clean bare nail that has been filed and shaped.  
Cleanse with your preferred cleanser.

#### FIRST IS IBX REPAIR IF AND WHEN NEEDED

- 1. APPLY** A thin layer of **IBX REPAIR** where needed.
  - Entire nail for gel polish.
  - Only where there is visible damage for natural nails.
- 2. HEAT** Gentle heat for **1** minute (you may use a nail polish dryer set to warm or a table lamp with a 75-100 watt bulb).
- 3. BLOT** Lightly blot the excess from the surface if needed.
- 4. CURE** With an LED or UV Lamp for the same amount of time your lamp cures your Gel Polish color coat.
- 5. CLEANSE** Nail with a lint free pad & your preferred cleanser.

#### NOW IT'S TIME FOR IBX STRENGTHEN

- 1. APPLY** Gently shake **IBX STRENGTHEN** and apply a thin layer over the nail plate.
- 2. HEAT** Gentle heat for **4** minutes (you may use a nail polish dryer set to warm or a table lamp with a 75-100 watt bulb).
- 3. BLOT** Lightly blot the excess from the surface if needed.
- 4. CURE** With an LED or UV Lamp for the same amount of time your lamp cures your Gel Polish color coat.
- 5. CLEANSE** Nail with a lint free pad & your preferred cleanser.

#### NOW WE'LL REPEAT THOSE FIVE STEPS FOR A SECOND APPLICATION OF IBX STRENGTHEN

- 1. APPLY** Gently shake **IBX STRENGTHEN** and apply a thin layer over the nail plate.
- 2. HEAT** Gentle heat for **2** minutes (you're getting the hang of this by now!).
- 3. BLOT** Lightly blot the excess from the surface if needed.
- 4. CURE** With an LED or UV Lamp for the same amount of time your lamp cures your Gel Polish color coat.
- 5. CLEANSE** Nail with a lint free pad & your preferred cleanser.

Now you're ready to go on and do your Gel Polish manicure as you normally would.  
**Remember: IBX** does not replace your Gel Polish base coat!

### ONGOING APPLICATION - UNDER GEL POLISH

For Ongoing **IBX** Treatments, follow the same instructions for **IBX REPAIR**.  
**Apply only one application of IBX during each follow-up appointment. You only have to use your heat source for 2 minutes!**

#### ALWAYS FOLLOW THE 5 SIMPLE STEPS

- 1. APPLY** Gently shake **IBX** and apply a thin layer over the nail plate.
- 2. HEAT** Gentle heat for **2** minutes.
- 3. BLOT** Lightly blot the excess from the surface if needed.
- 4. CURE** With an LED or UV Lamp for the same amount of time your lamp cures your Gel Polish color coat.
- 5. CLEANSE** Nail with a lint free pad & your preferred cleanser.

### IBX Quick Reference

1. APPLY THINLY

2. HEAT

3. BLOT

4. CURE

5. CLEANSE

## FOR NATURAL NAILS

### FIRST APPLICATION - FOR NATURAL NAILS

**Always start with a clean bare nail that has been filed and shaped.**  
Cleanse with your preferred cleanser.

**Assess the nails to see if there are any damaged areas that need IBX REPAIR.**  
**If not, proceed directly to the IBX STRENGTHEN application.**

1. **APPLY IBX REPAIR** directly INTO the gap (separated/damaged areas). If needed, apply **IBX REPAIR** again until the damaged areas are completely "filled".
2. **HEAT** Gentle heat for **1** minute (you may use a nail polish dryer set to warm or a table lamp with a 75-100 watt bulb).
3. **BLOT** Lightly blot the excess from the surface if needed.
4. **CURE** With an LED or UV Lamp for the same amount of time your lamp cures your Gel Polish color coat.
5. **CLEANSE** Nail with a lint free pad & your preferred cleanser.

#### NOW IT'S TIME FOR IBX STRENGTHEN

1. **APPLY** Gently shake **IBX STRENGTHEN** and apply a thin layer over the nail plate.
2. **HEAT** Gentle heat for **4** minutes (you may use a nail polish dryer set to warm or a table lamp with a 75-100 watt bulb).
3. **BLOT** Lightly blot the excess from the surface if needed.
4. **CURE** With an LED or UV Lamp for the same amount of time your lamp cures your Gel Polish color coat.
5. **CLEANSE** Nail with a lint free pad & your preferred cleanser.

#### NOW WE'LL REPEAT THOSE FIVE STEPS FOR A SECOND APPLICATION OF IBX STRENGTHEN

1. **APPLY** Gently shake **IBX STRENGTHEN** and apply a thin layer over the nail plate.
2. **HEAT** Gentle heat for **2** minutes (you're getting the hang of this by now!).
3. **BLOT** Lightly blot the excess from the surface if needed.
4. **CURE** With an LED or UV Lamp for the same amount of time your lamp cures your Gel Polish color coat.
5. **CLEANSE** Nail with a lint free pad & your preferred cleanser.

Now you're ready to go on and do your manicure, just as you normally would.

**Remember: IBX** does not replace your polish base coat!

### ONGOING APPLICATION - FOR NATURAL NAILS

For Ongoing **IBX** Treatments, follow the same instructions for **IBX REPAIR**.

**Apply only one application of IBX during each follow-up appointment. You only have to use your heat source for 2 minutes!**

#### ALWAYS FOLLOW THE 5 SIMPLE STEPS
